

Fan Starter

Fan Starter

- ✓ Reduces energy costs
- ✓ Minimizes the volume of heated air extracted air from the premises
- ✓ Allows a stop delay of up to 5 minutes to ensure extraction of remaining dust and fumes

The cost-effectiveness of the extraction system can be improved if the fan only operates when work is being carried out. A fan contactor can be activated via a sensor clamp attached to the earth cable of welding equipment or a switch in the hood.

Fan Starter

Certifications	CE
Protection class	IP 65
Installation	Indoor
