MEP SmartFilter is a multi-purpose filtration system. It is customizable to perfectly fit customer specific demands. Suitable for different dust types and can be used in several different applications such as grinding, shot blasting and general dust. The modular design allows for standalone solutions as well as multi-filter solutions for extended requirements. The MEP dust collector uses our long established fabric envelopes that are easily maintained through the front hinged doors. Filter envelope materials for most applications are available, dependent on dust type, dust load and efficiency requirements. Constructed in 2 mm galvanized steel panels, it is easy to install, cost effective to ship and provides corrosion protection. The design is optimized for long filter lifetime providing low cost of ownership. Insight ready control with advanced pulse cleaning logic provides for full system operation including control and monitoring, as well as gateway functionality for cloud communication. The MEP SmartFilter has a large accessories program including; fans, inlets, bins etc. and the envelopes are available in a wide variety of materials.
