

Truck Loader type ATL

Safe and efficient loading of wood waste into truck trailers.

Truck Loader type ATL

- ✓ Automatic Loading - Reduces need for manual equipment or man-power to load material.
- ✓ Sealed Cover - Minimizes mess or spilled dust around the container and keeps the material dry.
- ✓ Overfill Protection - Sensors monitor material level and prevent overfilling.
- ✓ Adaptable - Cover designed to create the best seal possible on trailers.
- ✓ Rapid Fill - Quickly loads material to keep factories productive.

Nederman truck loaders offer a safe, clean and effective solution for loading conveyed or stored material into a truck trailer for transport. The loader features a cover that lowers onto the top of a container creating a seal that minimizes fugitive dust and keeps the material dry. An integrated conveyor then loads the material evenly throughout the trailer. Sensors monitor the loading level and helps prevent overfilling.

The high capacity feed conveyor can fill up to 180 m³/hr meaning that a standard truck trailer can be filled in approximately 30-45 minutes.
